

About the OMA

“A great deal has changed since Ontario Mining Association's founding nearly 100 years ago, but our mission remains consistent: to improve the competitiveness of Ontario's mining industry, while promoting safety and sustainability.”

About the Role

Supported the OMA team with various components which included environmental and energy management, government relations and supporting OMA committees by conducting research and providing accurate information and data analysis for projects

Lessons Learned

- Writing and communicating sustainability issues in an **accessible language** for business, government and public audiences
- **Industry perspective** on sustainability and how it is managed amongst various other business priorities
- Analytical skills in understanding provincial and federal environmental **policy and regulations**

Major Projects

Gold Mine GHG Intensity Analysis

- Calculated and presented **GHG intensities** of OMA member mines to the Environment Committee to help companies align their emissions with new OBPS and proposed EPS carbon regulations

Biodiesel Research and Literature Review

- Researched and compiled a review of **biodiesel** to provide OMA members key information on biodiesel's potential use in mining moving forward

Target Zero+ Initiative

- Helped launch **Target Zero+**, OMA's new initiative which aims to move Ontario mining in a direction with zero waste, zero carbon emissions, and zero harm
